By John W. Chinneck : Feasibility and Infeasibility in Optimization:: Algorithms and Computational Methods (International Series in Operations Research & Management Science) Feasibility and Infeasibility in Optimization:: Algorithms and Computational Methods (International Series in Operations Research & Management Science):

Written by a world leader in the field and aimed at researchers in applied and engineering sciences this brilliant text has as its main goal imparting an understanding of the methods so that practitioners can make immediate use of existing algorithms and software and so that researchers can extend the state of the art and find new applications It includes algorithms on seeking feasibility and analyzing infeasibility as well as describing new and surprising applica From the reviews This book is really the first monograph to summarize the growing body of research on the analysis of feasibility and infeasibility of optimization problems With up to date coverage and very thorough bibliography it will be of definite
