By A.N. Tikhonov, A. Goncharsky, V.V. Stepanov, Anatoly G. Yagola : Numerical Methods for the Solution of Ill-Posed Problems (Mathematics and Its Applications) course descriptions courses offered in our department for applied and computational mathematics control and dynamical systems and computer science are listed below mathematics calendar questions and answers regarding this page can be sent to mathcalamsorg you can submit an entry to the mathematics calendar Numerical Methods for the Solution of Ill-Posed Problems (Mathematics and Its Applications):

Many problems in science technology and engineering are posed in the form of operator equations of the first kind with the operator and RHS approximately known But such problems often turn out to be ill posed having no solution or a non unique solution and or an unstable solution Non existence and non uniqueness can usually be overcome by settling for generalised solutions leading to the need to develop regularising algorithms The theory of ill po Language Notes Text English translation Original Language Russian
