Preceptorial Many other texts on Conway's cellular automata CA and Game of Life GOL programs go for 125 and more and aren't nearly as complete as this stunning text. The editor carefully selected a range of journal quality articles from the infancy of the game to numerous present and future applications. This review In the late 1960s British mathematician John Conway invented a virtual mathematical machine that operates on a two dimensional array of square cells. Each cell takes two states live and dead. The cells' states are updated simultaneously and in discrete time. A dead cell comes to life if it has exactly three live neighbours. A live cell remains alive if two or three of its neighbours are alive otherwise the cell dies. Conway's Game of Life became the most popular game of life. From the reviews "This volume contains 27 papers offer some systematic methods and rigorous theorems that exhibit the study of Conway's game and its variations emerging out of the realm of merely recreational mathematics." this unique book.
