The recent development of quantum computing and quantum algorithmics has raised important questions in cryptography. With Shor's algorithm, Peter W. Shor, Polynomial Time Algorithms for Prime Factorization and Discrete Logarithms on a Quantum Computer, SIAM J. Sci. Statist. Comput. 41:2, 303-332, 1999, the collapse of some of the most widely used techniques for securing digital communications has become a possibility. In consequence, the everlasting duty of the cryptographic research community
