**By Maxime Crochemore, Christophe Hancart, Thierry Lecroq : Algorithms on Strings** this page allows you to generate random text strings using true randomness which for many purposes is better than the pseudo random number algorithms typically used tutorials on algorithms and fundamental programming concepts every tutorial includes both c and java implementations Algorithms on Strings:

The book is intended for lectures on string processes and pattern matching in Master's courses of computer science and software engineering curricula. The details of algorithms are given with correctness proofs and complexity analysis which make them ready to implement. Algorithms are described in a C-like language. The book is also a reference for students in computational linguistics or computational biology. It presents examples of questions related to the automatic. The material is well explained and the treatment of the subjects covered is quite complete. Ricardo Baeza-Yates Mathematical's About the Author Professor Maxime Crochemore received his PhD in 1978 and his Doctor
